TO WHOM IT MAY CONCERN:

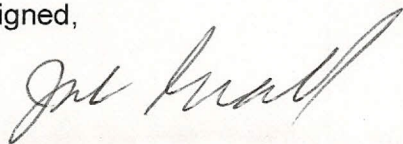

RE: Demitri Musaphir
DOB: April 11, 1997
File #926 056
MHS #012 266

I am the Pediatrician who has cared for Demitri since birth. Unfortunately, Demitri has significant medical issues and is unable to take food by mouth. He needs to be fed a liquid diet by a tube that goes into his stomach. He is fed overnight. He is also unable to do his own toileting, therefore must be in a diaper.

Demitri's mother, Majda, developed a cream specifically to help Demitri's significant diaper rashes. Because of his feeds overnight, he has a wet and dirty diaper every morning and was getting very significant rashes. None of the typical diaper rash creams helped him. The cream Demitri's mother developed, however, has kept the skin in his diaper healthy. Since she has been using it, Demitri has never come in with a diaper rash. Mother has also used it around the site where his feeding tube goes into his stomach and the skin in this area has also always looked healthy since she started using her cream.

Majda has now developed and is marketing this cream as *Baby Butz* and because of its success with Demitri I am recommending it to my patients.

Signed,

Janet Grabowski, B.Sc.(Med.), M.D.,
FRCPC
